## What causes tornadoes?

Tornadoes are caused by the interaction of warm, moist air from the Gulf of Mexico and cold, dry air from Canada. When these two air masses meet, they create a zone of instability that can lead to the formation of

thunderstorms. If the conditions are right, these thunderstorms can produce tornadoes.

### **Where do tornadoes occur?**

Tornadoes can occur anywhere in the world, but they are most common in the Great Plains of the United States. They can also occur in other parts of the world, such as Europe, Asia, and Australia.

### **When do tornadoes occur?**

Tornadoes can occur at any time of day or year, but they are most common in the spring and summer months. They are also more likely to occur in the afternoon and evening hours.

### **What are the signs of a tornado?**

There are several signs that can indicate that a tornado is about to form. These signs include:

- A dark, rotating cloud
- A funnel cloud
- A loud, roaring noise
- Debris flying in the air

### **What should you do if you see a tornado?**

If you see a tornado, you should take shelter immediately. The best place to take shelter is in a basement or underground storm shelter. If you do not have access to a basement or storm shelter, you should go to the lowest

level of your home and find a room that is as close to the center of the house as possible. You should also stay away from windows and doors.

### **What should you do after a tornado?**

After a tornado has passed, you should check for injuries and damage. If you are injured, you should seek medical attention immediately. If your home has been damaged, you should contact your insurance company. You should also be aware of the potential for downed power lines and other hazards.

### **How can you prepare for a tornado?**

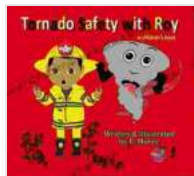

There are several things you can do to prepare for a tornado. These things include:

- Make an emergency plan
- Have a tornado safety kit
- Practice tornado drills
- Stay informed about the weather
